

UploadM8 Marketing Dashboard & Ads Playbook

Audience: Founder / master admin. Goal: run the in-app AI/ML marketing ecosystem automatically; only paste Meta/TikTok ads yourself for acquisition, verification, and budget control.

Source markdown: docs/marketing-dashboard-playbook.md

1. Mental model

- Paid ads (Meta/TikTok) - YOU paste creative + UTM URL and set budget
- Pixels (GA4/Meta/TikTok) - config on live site; optimize ad platforms
- Acquisition CRM - UTM signup to paid attribution (automatic)
- Marketing Funnel - in-app nudge shown/click/dismiss (NOT ad CTR)
- Business Need Signals - free uploaders, low PUT/AIC, multi-platform
- AI Strategist Generate/Deploy - you click; then in-app campaigns run
- Wallet nudges - automatic for logged-in users
- Path A - rule-based email/Discord when env + Enable outbound
- Path B - ML campaigns need approve + execution tick

Remember

Funnel CTR is wallet nudge CTR inside the product. Ads feed Acquisition CRM via UTMs. Pixels do not write UploadM8 marketing_events.

2. You vs automated

You (manual)

- Paste ads + set budget in Ads Manager
- Copy UTM landing per flight
- Optionally Enable Path A outbound later
- Approve + execution tick for email/Discord Path B
- Tinker homepage / hero creative

Automated / almost automated

- Wallet / in-app nudges
- AI Strategist Generate -> Deploy In-App
- Path A loop when env + gate on
- Truth Dashboard audit after Generate/Deploy
- Business Need Signals + Funnel from live data

3. Prerequisites (do once)

3.1 Access

- [] Log in as admin / master admin
- [] Open production admin-marketing.html
- [] Hard refresh (Ctrl+Shift+R)

3.2 Conversion pixels (already configured locally)

GA4: G-ND7HVJC1BL

Meta: 1613855987129945

TikTok: DAFFIFBC77UEK70HRUG0

- File: frontend/js/conversion-pixels.local.js (gitignored - must exist on prod host)
- Confirm Conversion pixels pill is green on admin-marketing
- Pixels stay OFF on localhost unless allow_localhost is true

3.3 Server env (verify in prod - names only)

- MARKETING_AUTOMATION_ENABLED=true - Path A loop
- MARKETING_ML_TARGETING_ENABLED=1 - Path B propensity
- Mailgun configured - email Path A/B
- OPENAI_API_KEY optional - improves Strategist copy
- Discord webhook if using Discord channel

3.4 Creative (~15s homepage hero)

- frontend/videos/hero-teaser.mp4 - homepage (~14-15s). USE THIS FOR FIRST ADS.
- frontend/videos/hero-demo.mp4 - longer how-it-works (~72s) later
- images/hero-final.png / hero-poster.png - still/poster fallbacks
- Optional: 9:16 crop for TikTok/Reels

Tinker the homepage anytime. When creative changes, re-export and re-upload in Ads Manager. Prefer hero-teaser.mp4 for a short ad.

4. Acquisition Command Center

4.1 Official social kit

- Save brand email / phone / handle if not locked
- Open create flow per network; paste bio + link-in-bio
- Passwords in 1Password/Bitwarden - not a spreadsheet
- Mark live when the account exists

4.2 Landing URL factory

- Click Meta paid or TikTok paid preset
- First flight: utm_campaign=traction_v1, utm_content=hook_create
- Copy landing URL -> paste as Ads Manager destination
- New flight: rename utm_campaign (e.g. traction_v2) for CRM attribution

Meta first flight:

```
https://app.uploadm8.com/signup.html?utm_source=meta&utm_medium=paid_social&utm_campaign=traction_v1&utm_content=hook_create
```

TikTok first flight:

```
https://app.uploadm8.com/signup.html?utm_source=tiktok&utm_medium=paid_social&utm_campaign=traction_v1&utm_content=hook_create
```

4.3 Attack pack (nothing auto-publishes)

- Channel = meta (then tiktok)
- Copy pack or Download CSV
- Paste primary/headline/CTA into Ads Manager
- Attach hero-teaser.mp4; destination = matching hook landing URL

5. How to implement ads

5.1 Shared rules

- One channel first (Meta), one hook (hook_create), small daily budget
- Always use UTM landing from Landing URL factory
- Confirm pixel PageView; signup/purchase when users convert

5.2 Meta Ads Manager

- Create campaign - Traffic (verify) or Sales/Conversions later
- Budget \$5-15/day to start - spend control lives ONLY here
- Audience: broad or creators / social managers
- Placements: Advantage+ or Feed + Reels
- Ad: Attack pack copy + hero-teaser.mp4 + Meta UTM URL
- Publish -> Events Manager + Acquisition CRM

5.3 TikTok Ads

- Traffic or Conversions; small budget; broad/interest
- Prefer 9:16 teaser; paste Attack pack copy; TikTok UTM URL
- Confirm TikTok Pixel receives events

5.4 Verify

- [] Ad click lands on signup.html with UTMs in the address bar
- [] Signup stores utm_source / utm_campaign
- [] Acquisition CRM shows UTM signups after intel refresh
- [] Pixel platforms show activity (may lag)

6. Marketing dashboard panels

- Marketing Funnel - wallet nudge events; Deploy In-App to feed it
- Business Need Signals - DB cohorts; grow with product usage
- Promo Timing - needs enough click signals
- AI Strategist - Generate then Deploy
- Truth Dashboard - appears after Generate/Deploy
- Acquisition CRM - needs UTM ads
- Path A gate - enable only after landings work
- Automation outbound log - after Enable outbound

6.1 AI Strategist - first settings

- Objective: Revenue Growth
- Tone: Executive Clear
- Offer Style: Value First
- Channel Mix: In-App (wallet nudges) - fastest automatic path
- Force Deploy: No (unless confidence stuck under ~55)
- Allow PII: No (sanitized)

Steps: Generate AI Plan -> if confidence $\geq$ ~55 Deploy AI Campaign -> in-app/discount can go active without email approval -> check Truth Dashboard -> wallet nudges appear -> Funnel fills.

6.2 Path A (later)

- Leave Disabled until ads/bios produce real landings
- Confirm `MARKETING_AUTOMATION_ENABLED` on prod
- Master admin Enable outbound; watch sent/dedupe_skip/failed
- Disable anytime

6.3 Path B (ML email/Discord)

- Apply to Campaign Builder / save templates
- Master approve (approval ticket)
- Run execution tick (or tick-after-approve)
- In-app Path B: Set Active only

7. Minimal ops (own ecosystem)

- Small-budget ads with UTM landings; bump `utm_campaign` per flight
- Get users into the app so signals + wallet events grow
- Generate -> Deploy In-App when confidence OK
- Path A Disabled until landings work
- Never expect Strategist to publish Meta/TikTok ads
- Homepage edits: re-upload teaser in Ads Manager when ready

8. Definition of done

Acquisition

- [] One Meta or TikTok ad live with UTM landing
- [] Budget capped in Ads Manager
- [] Pixel events visible
- [] ≥ 1 UTM signup in Acquisition CRM

Product loop

- [] Business Need Signals updating over time

- [] Funnel shows shown/clicks after Deploy In-App
- [] AI Generate + Deploy in Truth Dashboard
- [] Wallet nudges visible as a target user

Creative

- [] Ads use hero-teaser.mp4 (~15s) or successor

9. Troubleshooting

Pixels not firing: local.js missing on prod or testing on localhost

Acquisition CRM empty: Ads missing UTMs - must use signup.html?utm_...

Funnel all zeros: No wallet events - Deploy In-App; use the app

Promo Timing sparse: Need more in-app clicks

Deploy blocked: Confidence < 55 - Force Deploy once or wait

Path A silent: Gate Disabled or env off

Path B email silent: Not approved / no execution tick

10. First-week schedule

- Day 1: Confirm pixels; Meta landing; 1 Meta ad with teaser + hook_create
- Day 2: Mark 1-2 socials live; Generate + Deploy In-App
- Day 3: Check Acquisition CRM + Funnel; adjust budget only
- Day 4: Optional second hook or TikTok
- Day 5: Truth Dashboard; homepage tweaks; re-export teaser if needed
- Day 6-7: Only then consider Path A Enable outbound

11. Cheat sheet

ADS: Attack pack + hero-teaser.mp4 + UTM URL -> Ads Manager (you)
ATTR: UTMs -> Acquisition CRM | Pixels -> Meta/GA4/TikTok
PRODUCT: Users -> signals + wallet events -> Funnel
AI: Generate -> Deploy In-App -> nudges auto
OUTBOUND: Path A gate later | Path B approve + tick
NEVER: Expect Strategist to publish Meta/TikTok ads
